

How to import a Clinical Template from the Zedmed Website.

From the Zedmed Templates Web Page download the templates you require and save the files somewhere on your local computer.

Now from the clinical system click on the top menu **Tools/Clinical WP Setup/WP Templates**.

Once in the WP Templates section click on the top menu **File/Import Template** and the following screen will appear.

Browse to where you have downloaded your template from the website and select it, enter a description for this template and click OK. It should now appear in your templates area.

To change any of the template parameters right click on the template and set accordingly.

If your template requires any changes edit as per normal.
